Associate of Science

STANTON CAMPUS

Fall 2019

The Associate of Science General degree program is a 60-credit transfer degree designed to prepare students to either transfer internally to the College's existing nursing and allied health programs after competitive admission requirements are met, or to transfer to a four-year institution upon completion. The curriculum provides students with a foundation in biology, chemistry, physics, and/or mathematics supplemented by electives in English, humanities, and social sciences.

PROGRAM SPECIFIC ADVISEMENT STATEMENT

Students interested in transferring to a four-year institution, must consult with their program advisor, counselor, or the admissions department at the receiving institution to find out how a transferable course will apply to their intended major requirements as well as to determine the age limits of acceptable courses.

*To complete program requirements, you must pass the above courses and earn at least **60 credits**. The number of courses and credits required for graduation may be more depending on your need for developmental education courses and the elective choices you make (if electives are a part of the program). Some programs also have college-level courses that you must take if you do not score at a certain level on the College Placement Test. If this applies to your program, the courses are listed at the top of the sequence sheet before the first semester of the course list.*
