

Science Education Chemistry Physics

Associate Degree Program

Careers in Teaching Start Here

Delaware has been experiencing teacher shortages in specific critical areas for over a decade. The STEM (Science, Technology, Engineering, and Mathematics) initiative recognizes the need for highly-qualified teachers in these areas, and the Department of Education consistently lists all science disciplines as a critical need for Delaware schools.

The Science Education Associate Degree prepares students for transfer to a bachelor's degree program that leads to a teaching career in high school physics or chemistry. The program provides rigorous science course work as well as field experience in a secondary school setting.

If you think you would enjoy working with high school students to solve mathematical problems, conduct scientific research, and apply scientific principles to explain everyday phenomena, then this is the career for you. Call today!
